Financial Close Achieved on Newhurst Energy-from-Waste Facility

State-of-the-art facility to provide thermal treatment for 350,000 tonnes of non-recyclable waste per year and generate up to 42 megawatts of low carbon electricity

LONDON, Feb. 11, 2020 /PRNewswire/ -- Joint venture partners Covanta Holding Corporation (NYSE: CVA) ("Covanta"), Biffa plc (LSE: BIFF) and Macquarie's Green Investment Group (GIG), have today announced that the Newhurst Energy-from-Waste ("EfW") Facility ("Newhurst") in Leicestershire, England, has reached financial close. Covanta and GIG will together own 50 percent of the state-of-the-art facility, with Biffa, the primary waste supplier for the facility, owning the remaining half of the project. Covanta will operate the facility under a long-term operations and maintenance agreement.

"The Newhurst EfW facility will provide important sustainable waste treatment capacity in the drive to move non-recyclable waste away from landfill and combat climate change," said Covanta CEO and President Stephen J. Jones. "Today's announcement marks our third of four initial development projects to reach financial close with Green Investment Group and our first project with Biffa. Together, we have created a powerful partnership that will provide meaningful returns in our pursuit to protect tomorrow."

"Biffa has a leading role to play in developing the recycling and energy from waste facilities that the UK needs if it is to become a low-carbon, resource-efficient economy," added Michael Topham, Chief Executive, Biffa. "Reaching this milestone at the Newhurst facility, along with our ambitious investments in recycling, are vital steps in the delivery of our strategic investment plans. We look forward to working with our partners to further reduce the UK's reliance on landfill or export as a more sustainable solution for managing non-recyclable waste."

Strategically located just off the M1 motorway in the East Midlands, the Newhurst EfW facility is a significant addition to the UK's waste management infrastructure. It supports both the Government's drive to reduce reliance on landfill and the UK's ability to treat more non-recyclable waste without relying on export to European facilities. The facility will use proven technology to provide up to 350,000 tonnes of annual treatment capacity for non-recyclable waste and will also generate up to 42 megawatts of electricity, enough to power around 80,000 homes.

"To increase resource efficiency, we need the right infrastructure. Together, GIG and Covanta are developing a pipeline of projects that will form the backbone of the UK's next generation waste management system," said Edward Northam, Head of Green Investment Group Europe. "Our ongoing partnership with Covanta is helping the UK reduce reliance on landfill for non-recyclable waste, creating a cleaner, greener environment for all. The Newhurst facility is an exciting new addition to that partnership and our first project investing alongside Biffa."

Construction of the facility is expected to take approximately 39 months to complete and will be led by Hitachi Zosen Innova ('HZI'), a global leader in EfW engineering and construction under a turnkey Engineering, Procurement and Construction ('EPC') contract. Over 300 jobs will be created during the construction period, providing related benefits to the local economy. Many opportunities will also be created for the local supply chain with a commitment from the project to purchase goods and services from nearby companies wherever possible.

The project combines Biffa's expertise and scale in waste management and control of significant feedstocks with Covanta and GIG's operational and development experience in EfW. Biffa will provide 70 percent of the fuel for the facility from its existing local waste collection services, and Covanta will supply technical oversight during construction in addition to operations and maintenance of the facility for an initial 20-year term.

About Covanta

Covanta is a world leader in providing sustainable waste and energy solutions. Annually, Covanta's modern Energy-from-Waste facilities safely convert approximately 21 million tons of waste from municipalities and businesses into clean, renewable electricity to power one million homes and recycle over 600,000 tons of metal.

Through a vast network of treatment and recycling facilities, Covanta also provides comprehensive industrial material management services to companies seeking solutions to some of today's most complex environmental challenges.

About Biffa

Biffa is the UK's leading sustainable waste management business. We have over 8,000 employees working across more than 200 sites to change the way people think about waste. We operate across the waste management value chain, including the collection, treatment, processing and disposal of waste, as well as the production and sale of recovered commodities such as energy, paper, glass, metals and plastic. We are first choice for customers, with our national customer base including local authorities, large corporates and SMEs, and purchasers of end-product commodities and energy. We are structured into two divisions: Collections and Resources & Energy. In FY19, the Group's total revenue was £1,091.2m and its Underlying EBITDA was £150.7m. Biffa has been listed on the London Stock Exchange since October 2016 under the ticker "BIFF".
